

VoxReader AI Test Document

Welcome to the VoxReader AI test document. This PDF has been created to verify that the continuous scroll feature works correctly. The reader should display all pages in a vertical stack without interruption.

This is the second paragraph on page one. It contains multiple sentences for testing the text-to-speech engine. The sentences should be read one at a time. Each sentence should be highlighted as it is spoken aloud.

Here is a third paragraph with more content. The speed control should allow adjusting from half speed to double speed. The voice selector should show all available system voices. Everything should work completely offline.

Chapter 2: Features

The continuous scroll feature means all pages are rendered at once in a vertical stack. You should be able to scroll through the entire document smoothly. When the reader reaches the end of one page, it automatically continues to the next page without any interruption.

Text-to-speech works by splitting the extracted text into individual sentences. Each sentence is spoken using the browser's built-in Speech Synthesis API. This means no internet connection is required. The app works entirely offline on your device.

Users can select different voices from a dropdown menu. They can also adjust the reading speed using a slider. The currently spoken sentence is displayed in a banner at the top of the viewer for easy reference.

Chapter 3: Conclusion

This is the final page of the test document. If you can see all three pages rendered in a continuous vertical scroll, the feature is working correctly! The page currently being read should be highlighted with a subtle blue glow around its border.

Thank you for testing VoxReader AI. This application was designed to provide a seamless reading experience similar to Microsoft Edge's Read Aloud feature, but as a standalone web application that works offline.
